

BIOMEDICAL ENGINEERING

Admission Requirements

Requirements for admission to graduate degree programs in biomedical engineering (M.S., Ph.D.) include the general admission requirements of The Graduate School as well as more stringent program requirements.

In general, the admissions process is highly competitive. Admissions decisions are based on the quality of the applicant's previous university-level academic work (as reflected by grade point average, or GPA), letters of recommendation (at least two letters are required for evaluation), GRE scores, and other evidence of past accomplishments.

A student may transfer a master degree from another institution if approved by the Graduate Director and major professor. The student is also allowed to transfer from an institution where no degree was obtained with the approval by both the Biomedical Engineering Program and the Graduate School. The course work must be relevant to the current degree and have content and level of instruction equivalent to that offered by the University's own graduate degree programs.
