

GEOLOGICAL SCIENCES, PH.D.

Learning Outcomes

1. Students will apply the knowledge, principles and practices of the primary areas of the geological sciences as well as those within their specialization area.
2. Students will generate original research that incorporates discipline-specific scientific methodology, quantitative problem-solving skills, equipment utilization, experimental or numerical techniques in the laboratory and/or in the field.
3. Students will effectively communicate discipline-specific research findings both orally and in writing at a professional level.
