

PSYCHOLOGY

Department Website (<http://www.psych.sc.edu/>)

Overview

Our Ph.D. program prepares graduate students for a psychology career with coursework taught by top researchers and hands-on research and clinical experiences. Students choose a concentration, find a faculty mentor, and explore the concepts that interest them in one of the top two nationally-ranked psychology programs in terms of research productivity. Here, students will gain the training and experience they need to research, teach, or practice psychology and to enter career positions at distinguished universities, institutes, medical centers, schools, hospitals, or private practices.

Doctoral students choose from among four concentrations in Clinical-Community Psychology (APA accredited as a program in clinical psychology), Cognitive and Neural Sciences, Quantitative Psychology, or School Psychology (APA accredited, NASP accredited). Students can also earn their master's degree on the way to their Ph.D.
