

BIOLOGY MINOR

Please note that the Biology minor is not available to students majoring in Chemistry or Biochemistry and Molecular Biology.

The biology minor offers students foundational knowledge of biological principles, chemistry, genetics and ecology. A background in biological sciences can lead to a variety of careers, including jobs in medicine* and allied fields, education, biotechnology, environmental agencies, science writing, forensic science, research, law, marine biology and more. Students may supplement their major course of study while honing their investigative and research skills, improving analytical and communication abilities and learning how to identify and solve problems using critical reasoning.

*Pre-health students may especially benefit from the interdisciplinary neuroscience degrees offered at the university.
