

# GEOPHYSICS MINOR

---

The minor in geophysics is designed for students interested in obtaining an introduction to geophysical techniques and their application in the study of Earth's systems. The minor complements many primary areas of study, particularly in the sciences, such as data science, and fields related to public policy. The minor is deal for students interested in expanding their quantitative skills and using them to gain an understanding of basic and applied aspects of Earth systems, including natural resources, the environment and natural hazards.
