A sociology degree gives students the research, communication and analytical skills needed to succeed in a wide variety of career fields. The Bachelor of Science in Sociology offers students transferable skills that lead to careers in research-oriented fields, business management, consumer relations, education, law, social work and more.

Similar to the B.A., students earning the B.S. degree learn to analyze and interpret data using statistical tools that will allow them to contribute to conversations surrounding gender and racial discrimination, class, poverty and other social inequalities. What differentiates the B.S. degree is that students will acquire additional mathematical skills that will further enhance their preparation for graduate school or research careers. They also learn to communicate effectively to challenge commonly held beliefs using data and empirical evidence, with an emphasis on analytical reasoning.

Our faculty guide students through courses that evidence the trends, characteristics and functions of the relationship between individuals and society. Graduates of our B.S. programs are prepared to enter the workforce or continue their graduate studies at USC and beyond.

Major students may pursue a Distinction in Sociology by achieving the requisite GPA and defending a research project. Sociology undergraduates planning to continue their graduate studies at USC can apply to the Accelerated Bachelor's Program to begin earning credit towards a master's degree while pursuing the Bachelor of Science in Sociology.

**Learning Outcomes**

1. Sociology majors completing the required SOCY 391 course will demonstrate they understand the general sociological perspective and the uses of sociological theory, can apply critical reasoning skills to evaluating theoretical explanations, and can identify uses and limitations of major sociological research methods in evaluating theories. Majors will evidence these ability to apply these skills to the study of social issues of broad impact and interest beyond the discipline.

2. Sociology majors completing advanced substantive courses (500-level) will demonstrate they (1) understand the major sociological theories in a specific substantive area of specialization, (2) can critically evaluate competing theories in the field, and (3) can identify and critique major methodological approaches within the specialty area. Examples of substantive areas are Social Inequality, Social Psychology, Sociology of the Family, and Sociology of Medicine and Health.

3. Sociology majors will demonstrate an understanding and ability to use the following statistical tools: 1. The distinction between descriptive and inferential statistics; 2. Levels of measurement, ratios and rates; 3. Various measures of central tendency and statistical variability used to describe distributions; 4. Hypothesis testing, sampling and inference from sample estimates for a population; 5. Simple bivariate modeling techniques such as correlation and regression.
